

Allan M. French

“Background Information”

DATA ANALYST • STAFF ACCOUNTANT

► Numbers Crunched • Beans Counted • Data Wrangled ◄

With a passion for analyzing data and developing software solutions, I am pivoting from *financial accounting and corporate finance* into *data analytics and managerial (cost) accounting*.

I help my employer utilize its data and manage its money, in the most efficient manner possible:

- In various capacities, I have used at least a dozen ERP systems and G/L accounting programs.
- Served clients in *seventeen* contract positions for *five* staffing agencies. *Five* seasonal clients/employers requested to re-engage, while *three* agency jobs were extended or renewed. I easily adapt to varying corporate cultures and quickly learn new software.
- Have been a liaison several times, interfacing between Accounting/Finance and Legal, IT, and Marketing teams.
- I love the profession I have chosen; and I would like to help your analytics team to address its data analysis and financial recordkeeping challenges.
- Received awards and commendations in various jobs. Quotations from some of these appear within my résumé.

On-the-job and off-the -clock:

- My employers and agency clients have included American Century Investments, Guidant Cardio-Vascular (now Boston Scientific), US Geological Survey, Tyco Healthcare (now Medtronic), Applied Materials, Hewlett-Packard, VMware, and SLAC National Accelerator Laboratory.
- My hobby and leisure interests include visiting museums and historical sites; photography; square/contra dancing; and acoustic music (beginner-level musician; bluegrass, folk, and Celtic music). I have written 105 newspaper columns, for a music-focused publication. During quiet times alone, I enjoy sudoku and jigsaw puzzles.

Beyond financial accounting, I have a passion for managerial (cost) accounting and data analytics. In other words, I am looking to *analyze vital business data rather than process recurring accounting transactions*:

- To facilitate this “pivot,” I enrolled in online training courses. Please click over to [MS Excel for the Data Analyst](#) and [Microsoft Professional Program in Data Science](#) for a brief description of the coursework.
- During college, I learned two programming languages, while today I create *Excel* macros using *VBA* scripts. I have rudimentary knowledge of *MS Access* and was exposed to two other database programs. Early on, I learned that *SQL* was a powerful tool for data management, but only recently did I have the opportunity to learn more.
- Expanding my skills into data analytics seems like a logical career progression. I am excited about what I might soon do with these new skills. While I am primarily looking to “analyze data,” I could help your accounting/finance team as well, since that it is the core of my past experience.

I may be qualified to help your team in several capacities, such as:

- | | |
|---|---|
| • Inventory management and cost accounting | • Cash balance optimization and bank account recons |
| • Financial forecasting and trend analysis | • Website analytics and social media utilization statistics |
| • Commissions analysis and payroll processing | • Other projects or special tasks that I’m unaware of |

This is only a summary. A résumé and other information can be accessed from my [Dropbox](#) or [GitHub](#) account, or by contacting me. Maybe ask to see my personal website and YouTube channel as well.
